Cost: \$125 USD Members

\$225 USD Non-Members

*(Note: Individual membership is only \$100)*

Two classes will be combined for this training event the day after the Brisbane Data Management Mini-Workshop.

## PDM-060: Introduction to Master Data Management

*Increasingly, the petroleum industry is focused on integrated life cycle asset management systems that bring together critical information from many disciplines over the decades long asset life cycle. Master data management solutions are designed to help define and manage critical data about assets to provide, through harmonization and data integration, a single point of reference. This class reviews fundamental master data management principles including data governance, data architectures, master data, data quality and the life cycle of data in the business. You will explore at a high level how the PPDM data model supports master data management concepts. Learn more on our [Training Page](#).*
